Declaration on consistent reporting of Approved Adjustments

Country: United Kingdom

Date of submission: *16/01/2026*

1. Adjustment(s) approved in 2026

Herewith the United Kingdom declares that *the methods / criteria*[1] *used* for the calculation of emissions for the years 2020 – 2023 are the same for NH_3 from NFR 3Da2c (Other organic fertilisers applied to soils (including compost)) as in the year the adjustments were approved. However, emission results and therefore the adjustment amounts are slightly different from the previous submission due to minor revisions to the underlying data used to calculate 3Da2c emissions. Table 1 below compares the adjustment amounts from the 2022 submission onwards.

The magnitude of the recalculation for 2005 was +0.00% between the 2025 and 2026 submissions, whilst for the latest year, 2023, the recalculation was +0.00%.

Table 2 summarises the UK NH_3 emission inventory for years 2020 onwards, and the corresponding adjusted national totals for compliance checking purposes for the 2026 submission.

[1] Parties may apply to adjust their emission reduction commitments or inventory data in extraordinary circumstances, as defined in EMEP Executive Body decisions 2012/3 and 2012/4 (see ECE/EB.AIR/111/Add.1) and amended by EB decision 2014/1
