

# Near-real time Air Quality Data (*Ozone web and future actions*)

**Jaume Targa**  
**EEA – ETC/ACC**

**National Air Quality Forecasting Seminar**

London City Hall

14<sup>th</sup> May 2008

# Content

## ■ Overview of current status

- *What is it?*
- *What's the coverage?*
- *How does it work?*

## ■ Objectives in 2008

- *Consolidation*
- *Extension to other pollutants*
- *Summer Ozone reporting*

## ■ Conclusions

# What is the Ozoneweb?

- An active exchange of near real time provisional air quality data between European Member States.
- The concept has evolved since its' inception in 2001.
- In July 2006, Ozoneweb was published on the EEA website (<http://www.eea.europa.eu/maps/ozone/map/>).

# Geographical coverage

# Current active ozone stations

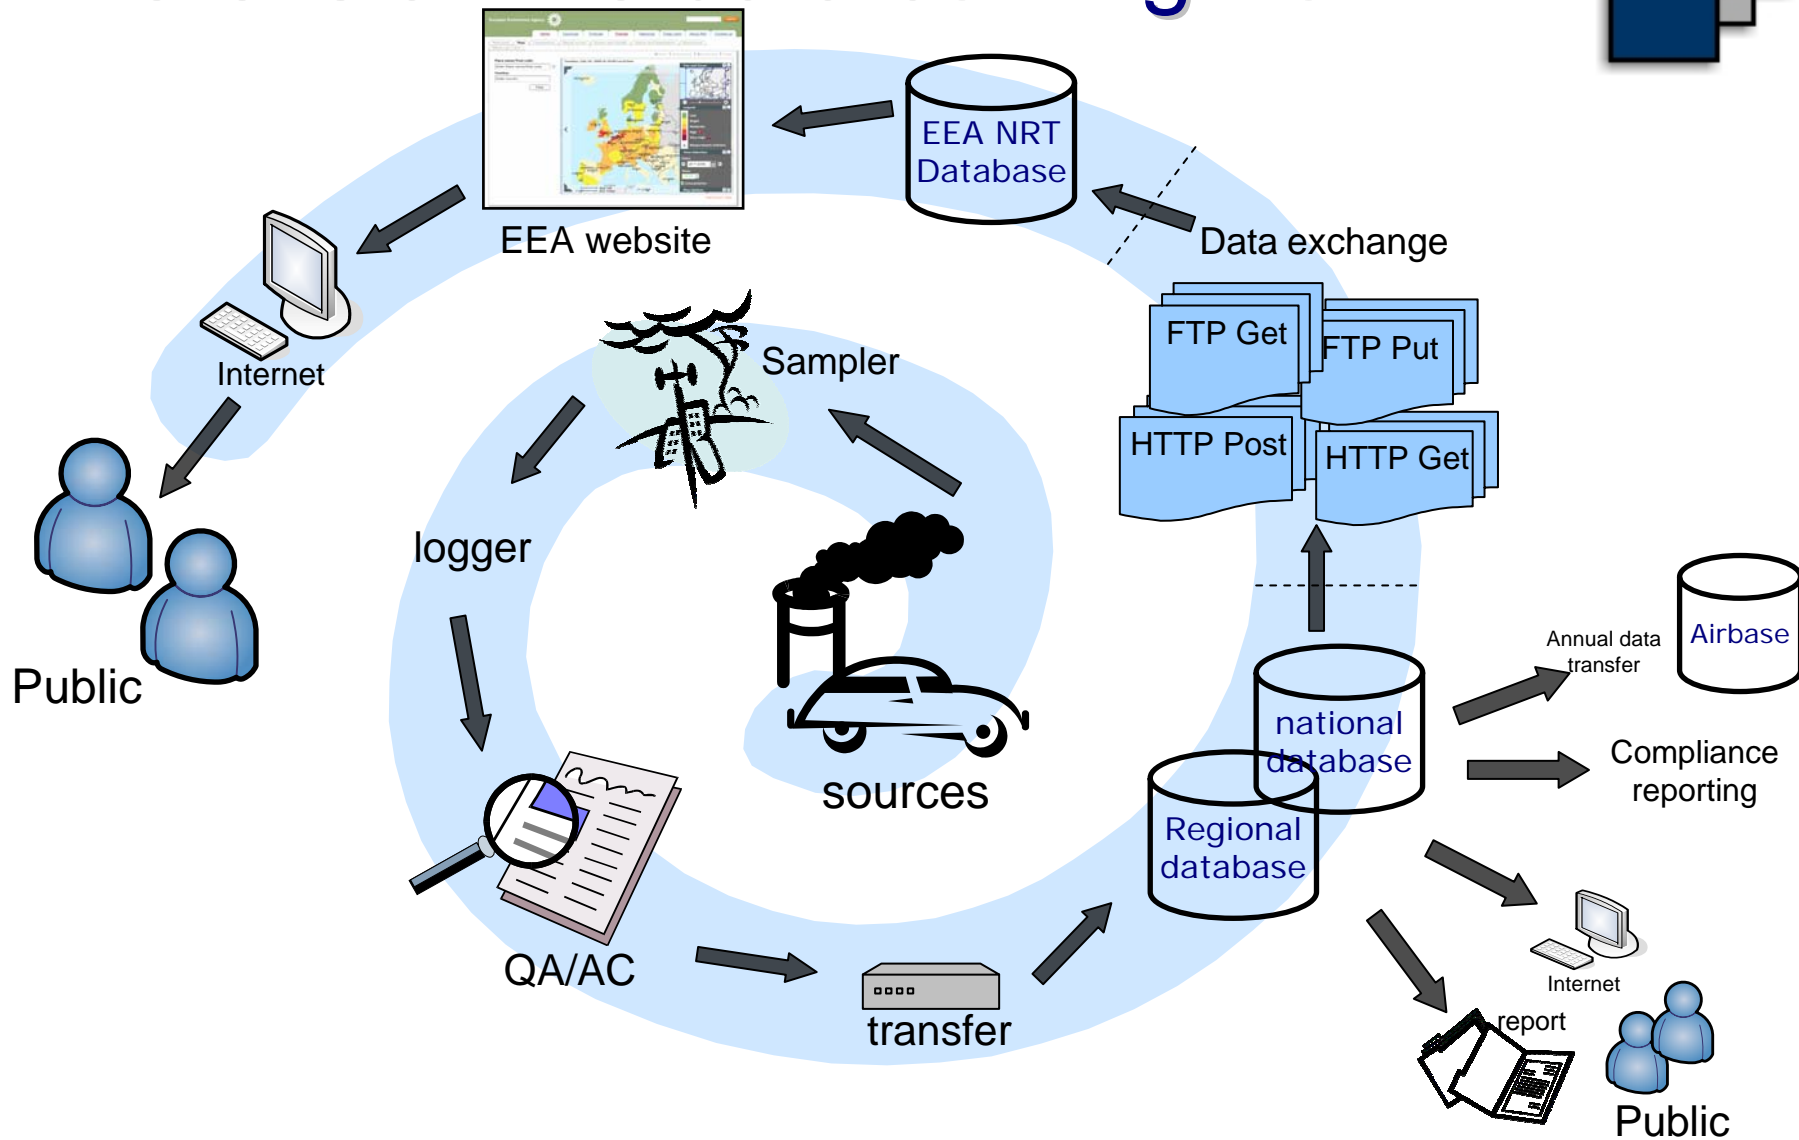

## Active Ozone stations

● OzoneActiveST

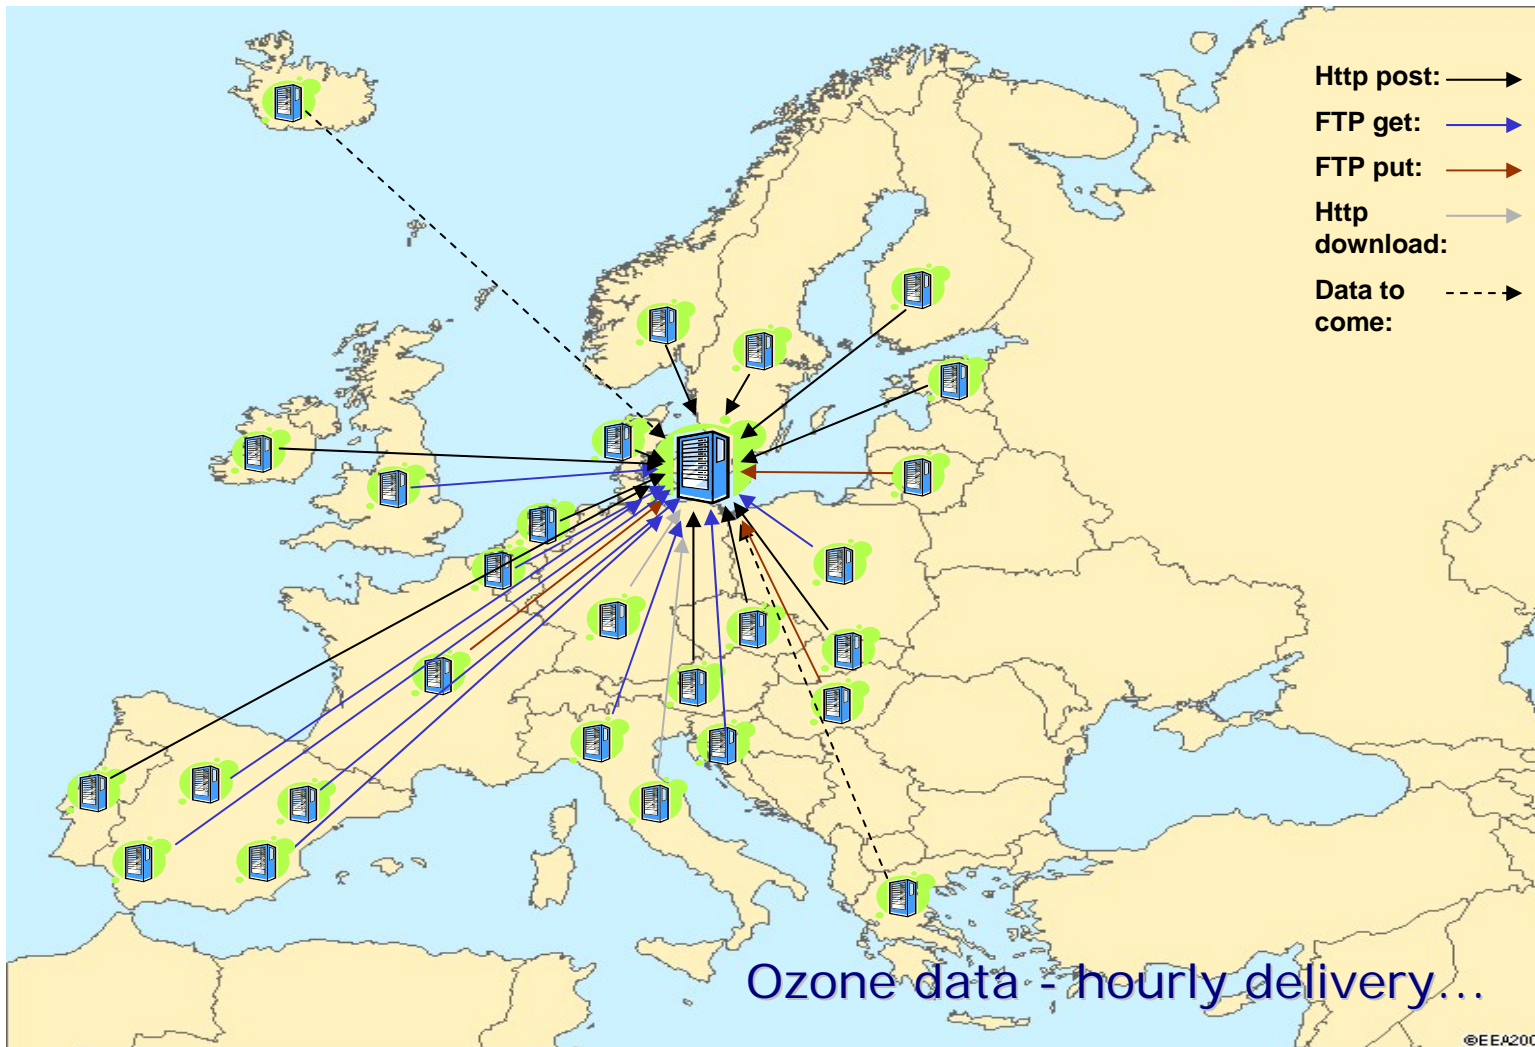

# Where is all the data coming from?

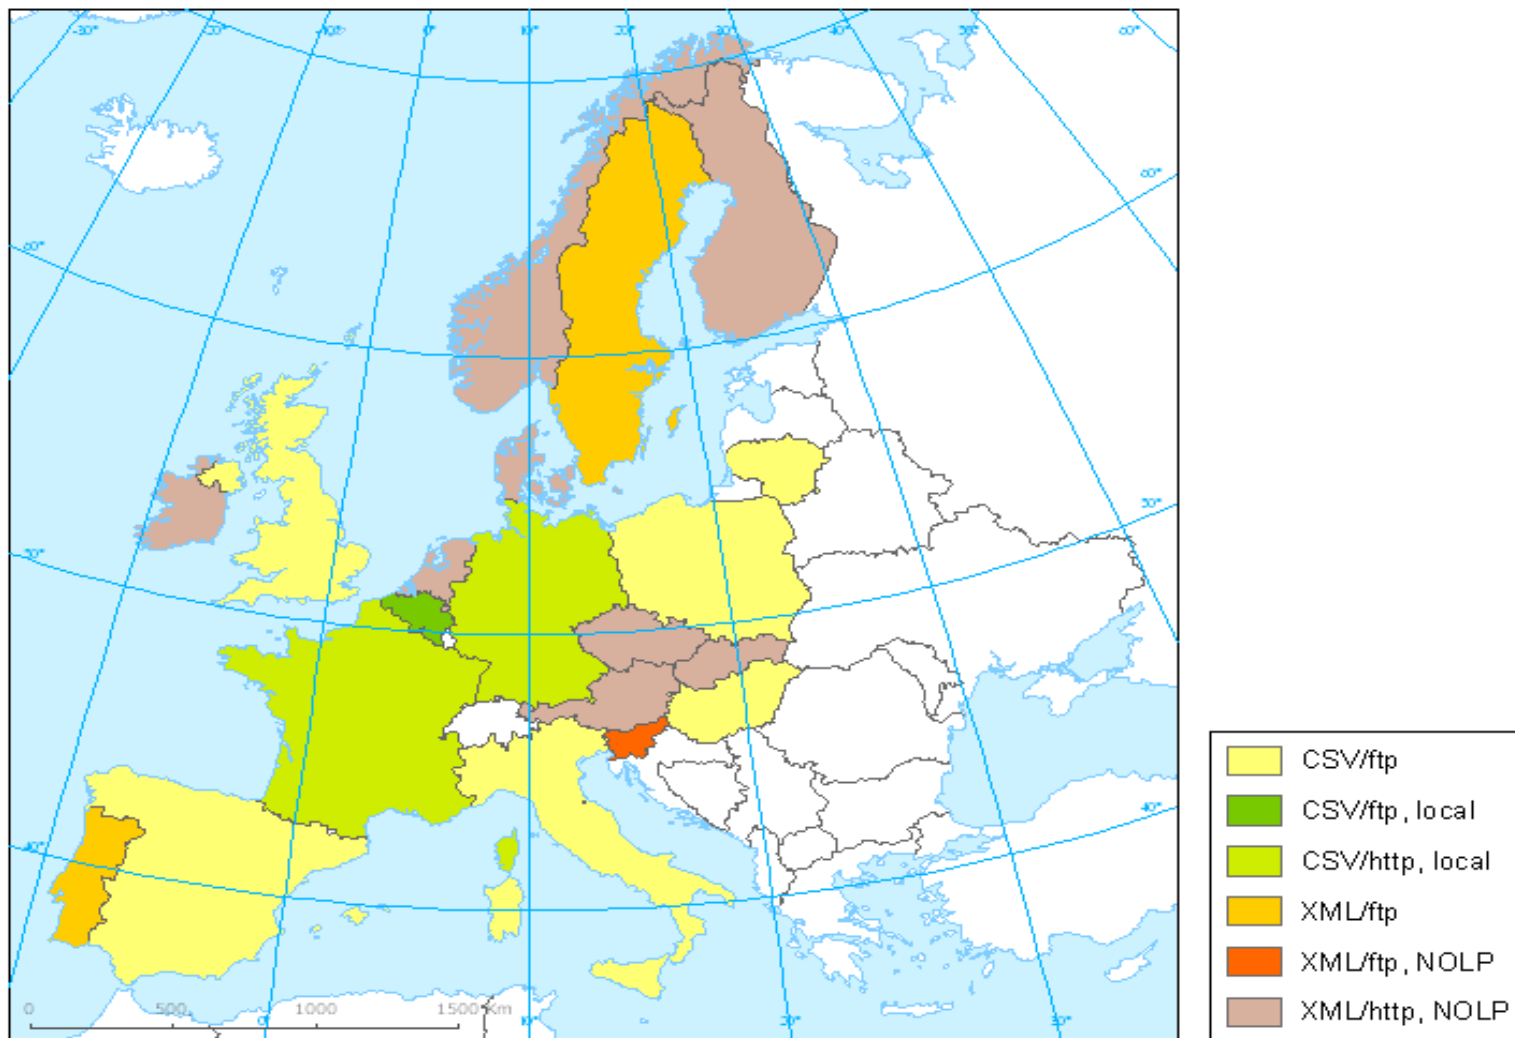

# How does it work?

# Data exchange mechanisms

# Principles of data exchange

- **Control:** Data providers remain in control of data provision and use.
- **Visibility:** Visibility to data providers (branding and their services).
- **Quality control:** Data received in real-time by EEA will be filtered for data outside pre-set limits and null or error values.
- **Added value services:** EEA aims to provide added value services back to the data provider organisations.

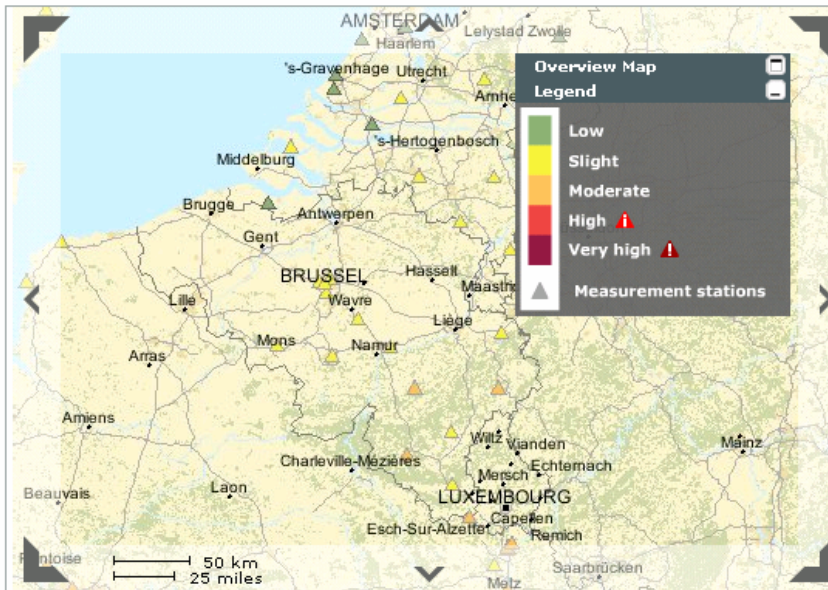

# Added value services – map viewer

- Presents O3 data in a mini map on website
- Presents European, national or regional level

## Belgium

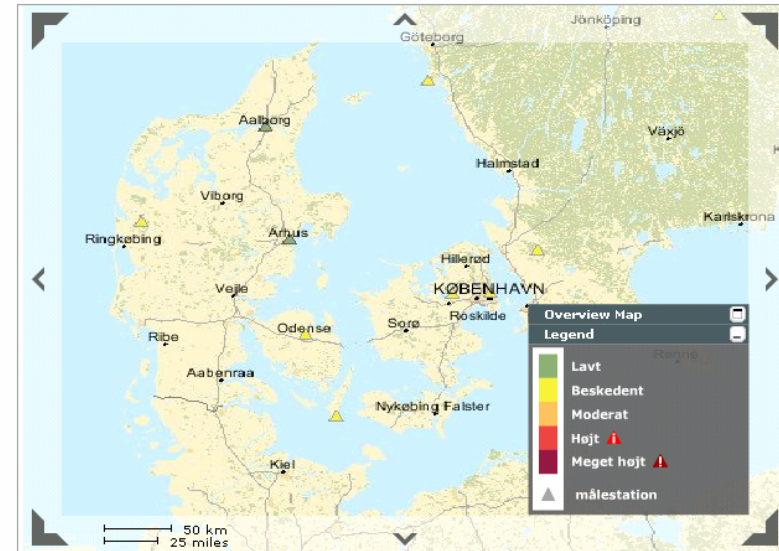

Tuesday, April 24, 2007 at 18:00 Local time

European Environment Agency 

## Denmark

Tirsdag, April 24, 2007 at 18:00 Local time

Det Europæiske Miljøagentur 

# Objectives in 2008

- Consolidation of data exchange
- Extend the NRT data exchange
- Summer Ozone Reporting

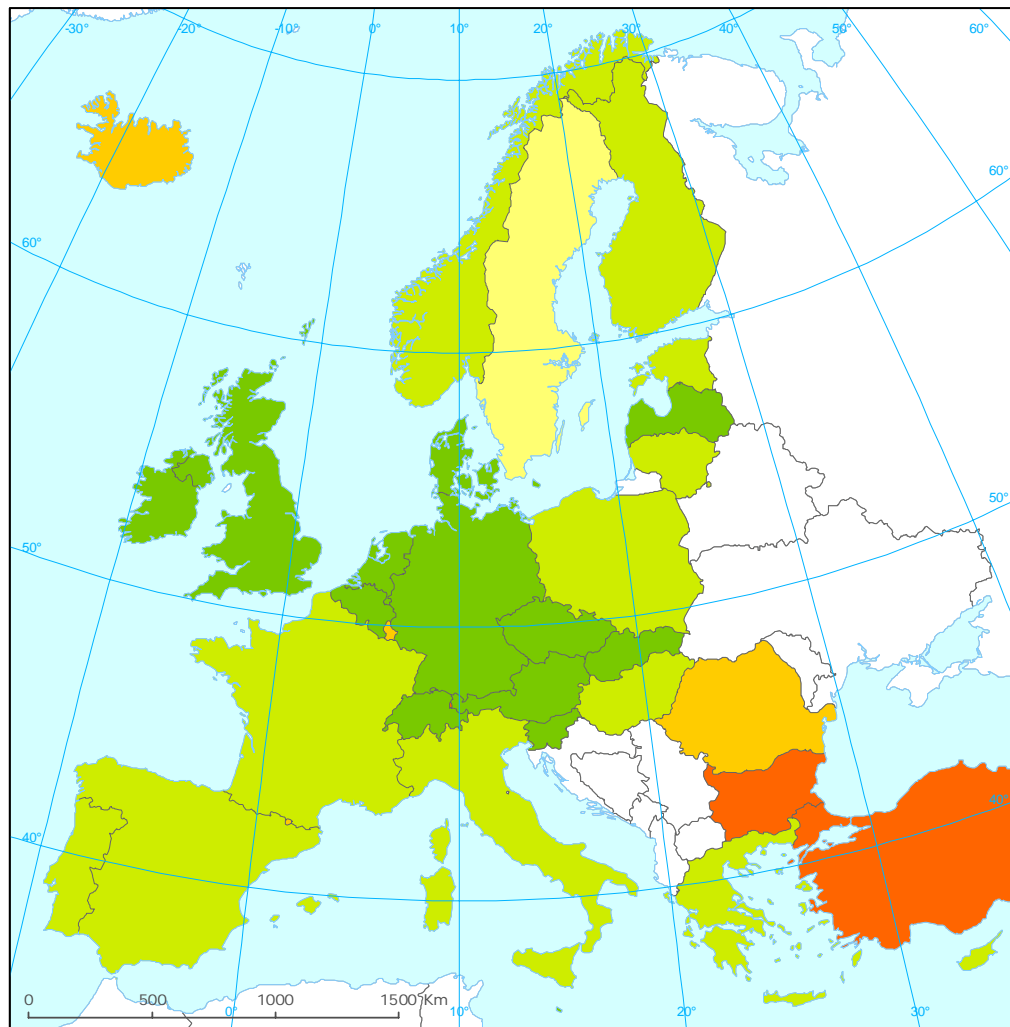

# Consolidation of data exchange

- Maintain current data exchange
- Increase number of stations of current participants (if necessary)
- Incorporate ozone data from none participants (both Member States and Regions)

# Consolidation of data exchange

## Ozone data sufficiency

- OK at 100
- OK at 200
- Not sufficient
- Sign-up underway
- Not providing data

# Priorities in 2008 for ozone

- Romania
- Bulgaria
- Iceland
- Luxemburg
- Turkey
- Italy - Southern and Central regions
- Spain - Consolidate some regions + EMEP
- Greece – increase coverage

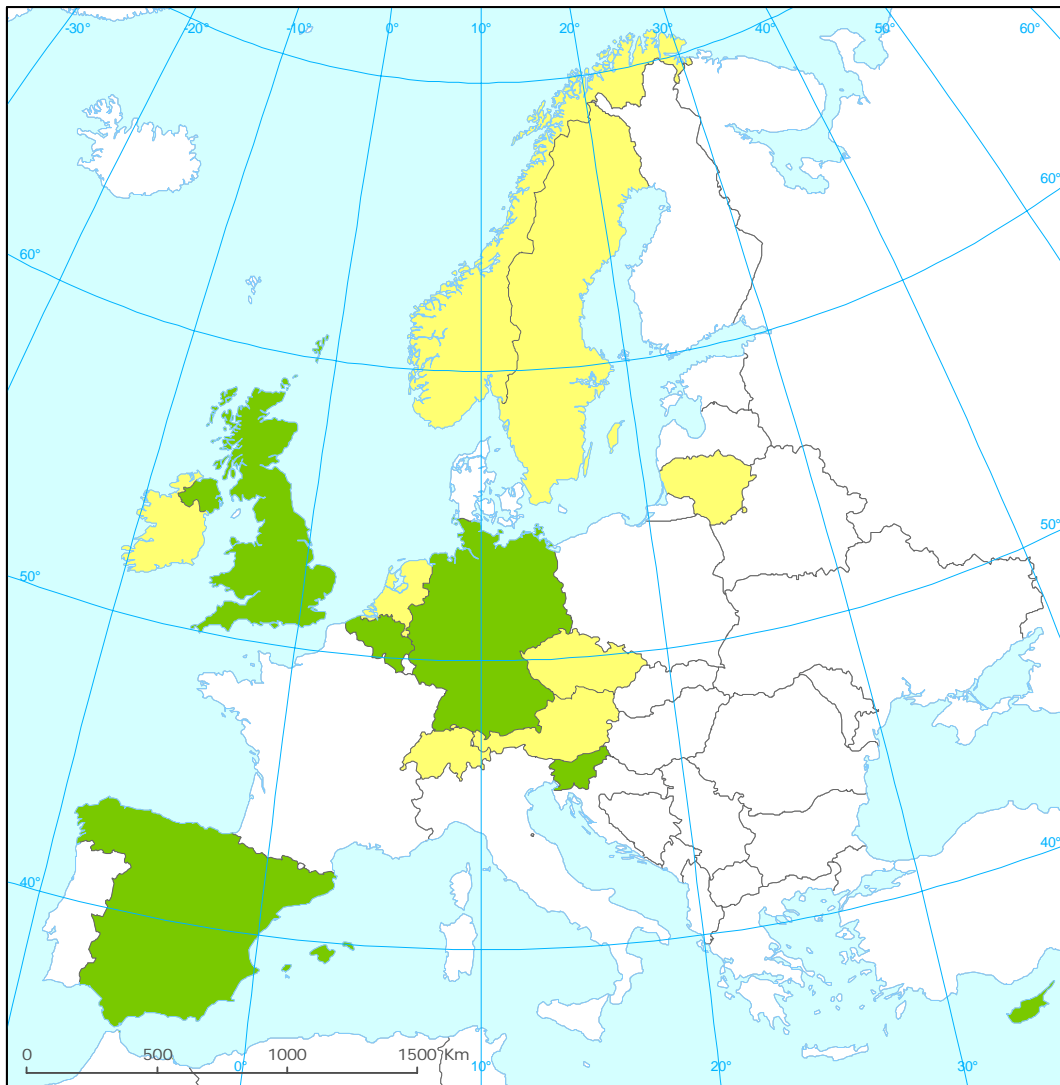

*Some already on board now...*

# Extension to other pollutants

- EEA has extended the data exchange system to cater for particulate matter and NO<sub>2</sub>
- Pro-actively encouraging air quality data exchange for Particulate Matter
- PM is strong candidate data to demonstrate that the successful ozone data exchange can be repeated for other parameters

# Extension to other pollutants

## Particulate matter (data status)

- Providing data
- sign-up underway
- data expected 2007

# Latest list of PM data providers

- Austria (AT)
- Belgium (BE)
- Cyprus (CY)
- Czech Republic (CZ)
- Germany (DE)
- Ireland (IE)
- Liechtenstein (LI)
- Malta (MT)
- Netherlands (NL)
- Norway (NO)
- Slovenia (SI)
- Spain – (Region of Andalusia)
- Switzerland (CH)
- United Kingdom (GB)

*500 stations +  
14 Member States*

# Using NRT data for summer ozone reporting

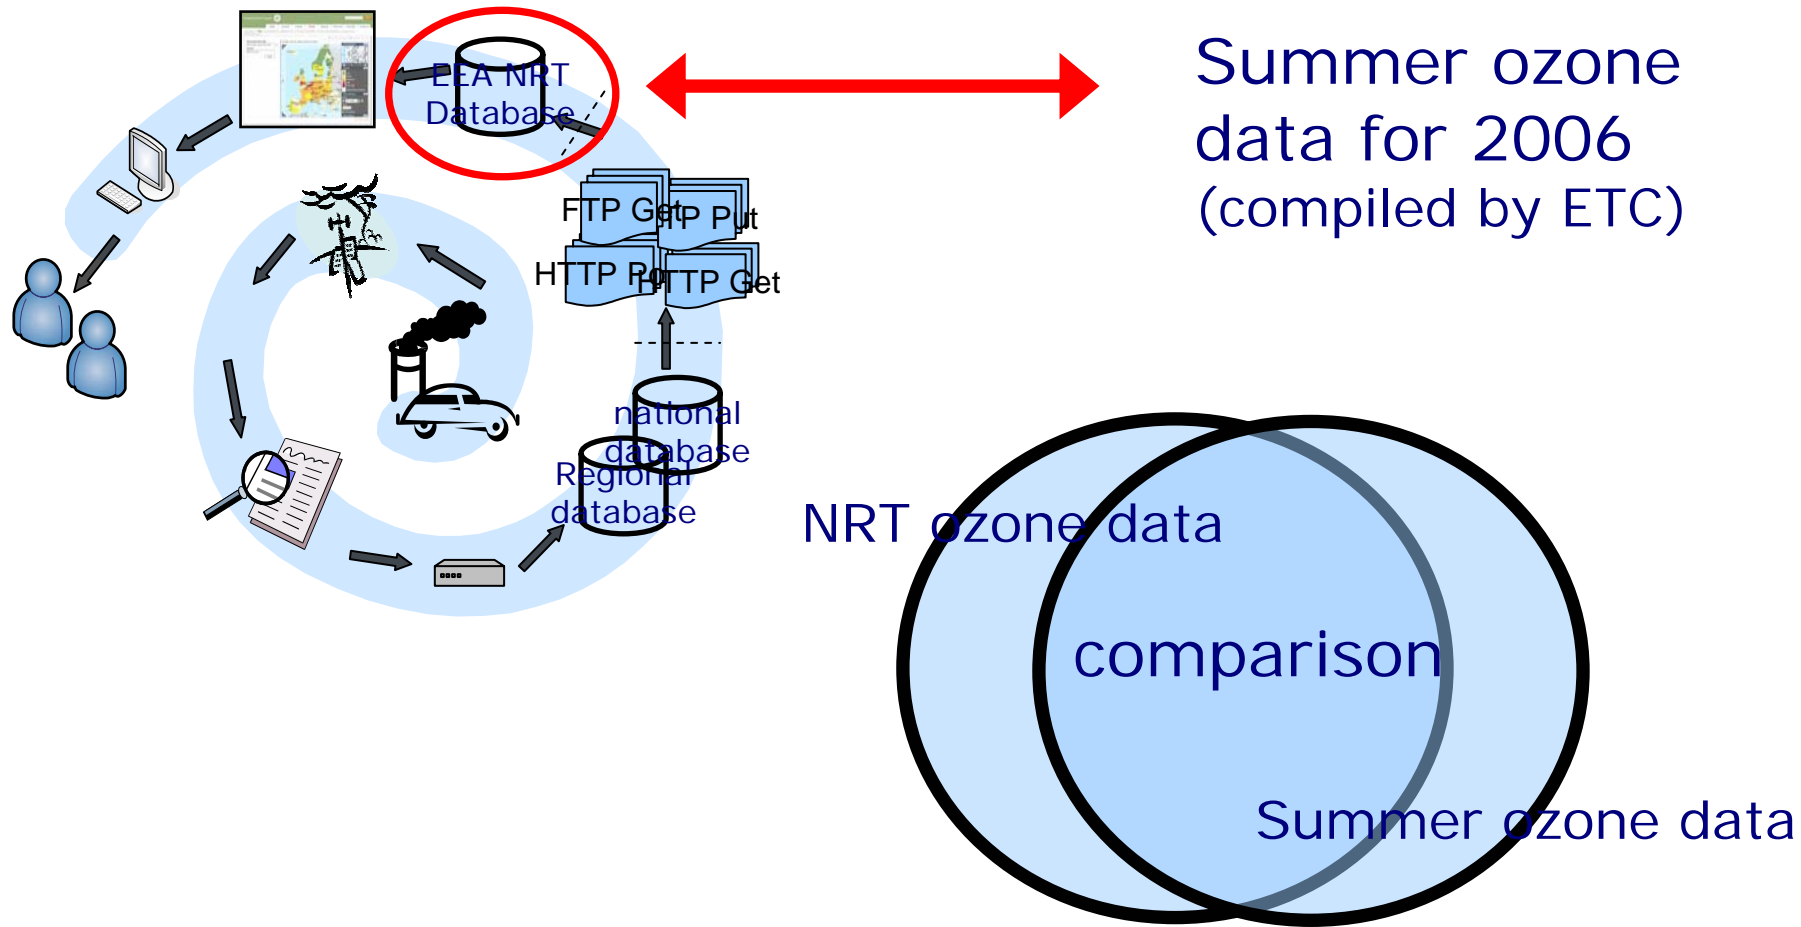

- Demonstrate that the system can be used to provide information relating to provisional ozone exceedances
- Provide a basis upon which countries and the Commission can discuss streamlining summer ozone reporting by countries to the European level.

# Using NRT data for summer ozone reporting

*Encouraging results with 2006 data*

# Using NRT data for summer ozone reporting

- Currently developing an interactive tool for data providers to administrate summer ozone data
- Pilot study with more than 10 Member States will be carried out this summer

## European overview

189 of 217 stations across Europe exceeded the EU information threshold since April

## Overview map

## Threshold values

- Information threshold ( $>180 \mu\text{g}/\text{m}^3$ )
- Alert threshold ( $>240 \mu\text{g}/\text{m}^3$ )
- Long-term health objective

## Summary

There have been 15 exceedances of the EU information threshold in May in Denmark. Denmark provides measurements from 7 stations, 7 exceeded the EU information threshold at least once in May.

[Ozone status today](#)  
[View data from previous years](#)

## Map

# Conclusions

## Near real time data exchange

- *Current and active data exchange*
- *Very good coverage across Europe*
- *Hourly delivery from more than 40 data providers...*

## Objectives in 2008

- *Consolidation*
- *Extension to Particulate Matter*
- *Summer Ozone Report Piloting...*

 Many thanks...
