

APPENDIX 1

Deposition trend data

1.1

Linear trend analysis of rainfall at UK monitoring sites 1986-2001 (mm y⁻¹). Significant trends ($p < 0.05$) are listed in the final column.

| site | slope | se | t_val | t_df | t_prob | Sigslope |
|-------------------------|--------------|-----------|--------------|-------------|---------------|-----------------|
| Stoke Ferry | 0.7 | 5.4 | 0.13 | 14 | 0.90 | |
| High Muffles | 14.8 | 7.2 | 2.06 | 14 | 0.06 | |

alk = Gran or Dual Endpoint Alkalinity; ANC = Acid Neutralising Capacity (AB-ANC, see Chapter 5); cond = Conductivity (20°C);
sol. Al = soluble monomeric aluminium, lab. Al = labile soluble monomeric aluminium; DOC = dissolved organic carbon

11.2 Burnmoor Tarn - epilithic diatom data

percentage frequency of all taxa in all summer samples with a minimum abundance >2%

11.3 Burnmoor Tarn - macroinvertebrate data

percentage frequency of all taxa in all spring kick samples with a minimum abundance >2%

11.4 Burnmoor Tarn - aquatic macrophyte data

relative abundance of taxa based on a 1-5 scale

1 = rare; 2 = occasional; 3 = frequent; 4 = abundant; 5 = dominant

11.5a Burnmoor Tarn - salmonid data

Brown trout (*Salmo trutta*) density.

0 group (<1 year old black bars) and 0+ group (>1 year old; grey bars), in lake outflow stream.

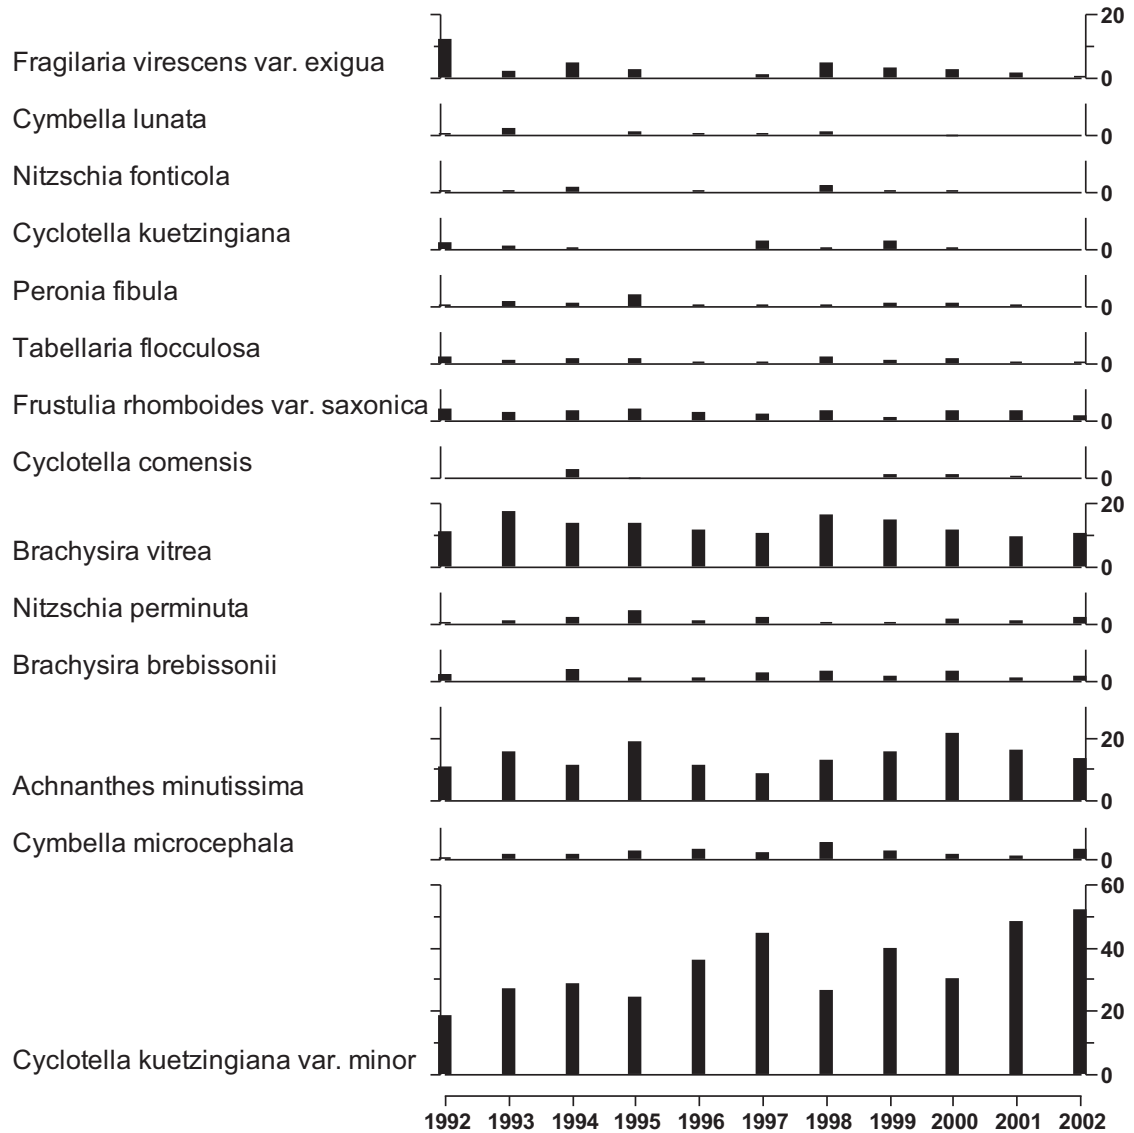

11.5b Burnmoor Tarn - salmonid data
 Brown trout (*Salmo trutta*) length frequency summaries

11.6 Burnmoor Tarn - sediment trap diatom data

Percentage frequency of all taxa in all samples (retrieved each summer) with a minimum abundance >2%

* Alkalinity and ANC records from May 1991.

alk = Gran or Dual Endpoint Alkalinity; ANC = Acid Neutralising Capacity (AB-ANC, see Chapter 5); cond = Conductivity (20°C);
sol. Al = soluble monomeric aluminium, lab. Al = labile soluble monomeric aluminium; DOC = dissolved organic carbon

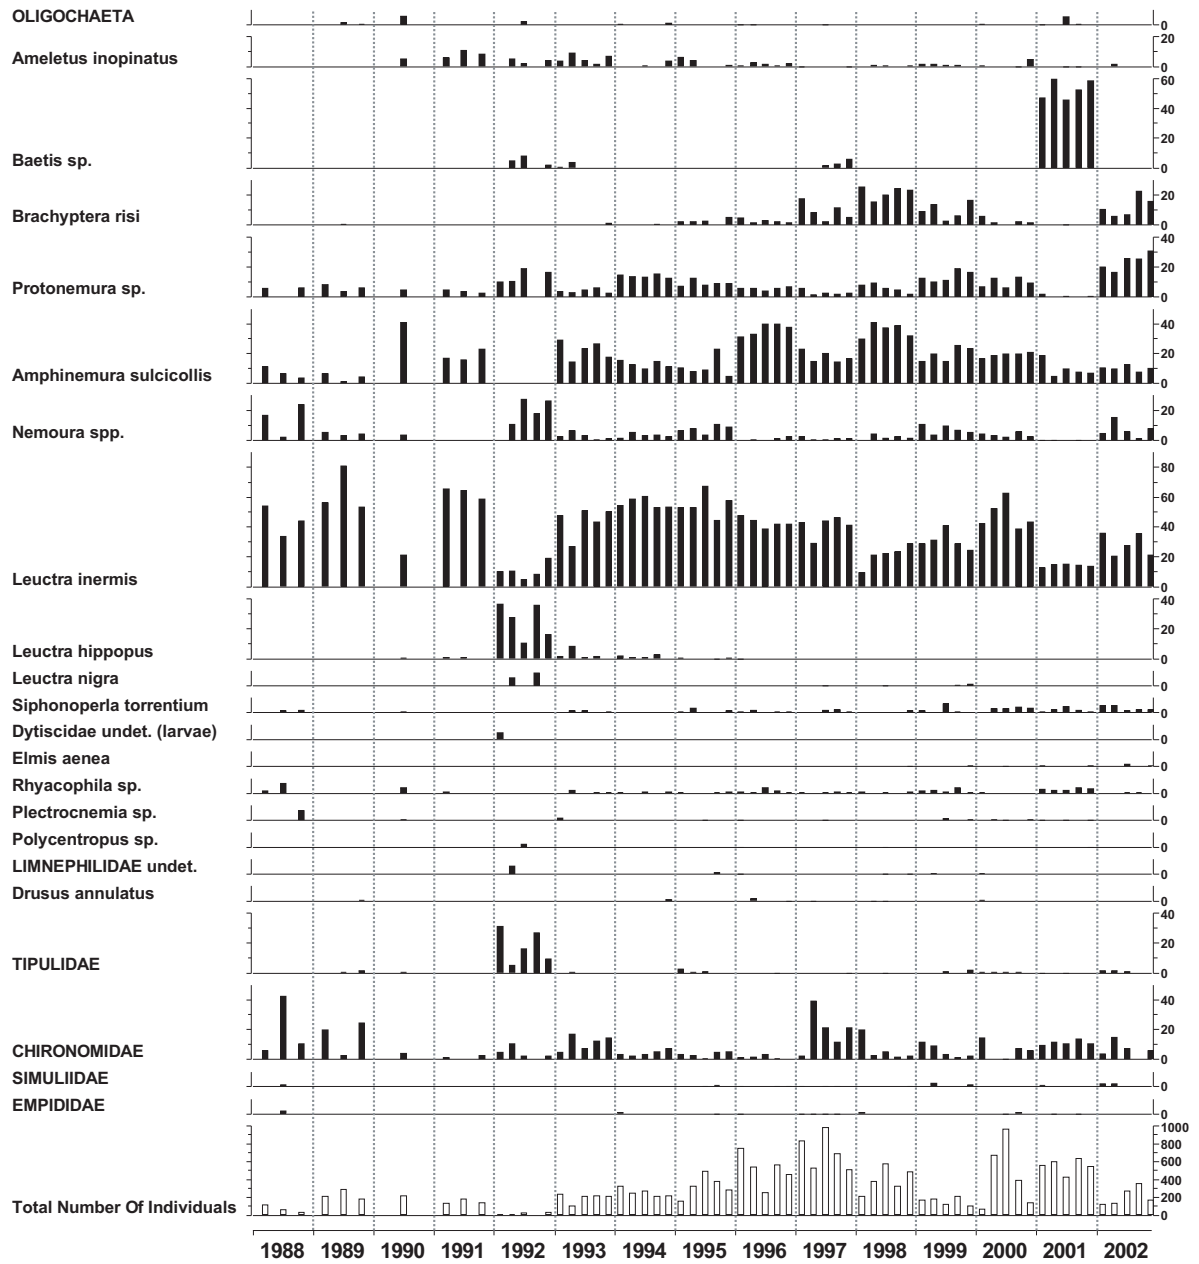

12.2 River Etherow - epilithic diatom data

percentage frequency of all taxa in all summer samples with a minimum abundance >2%

12.3 River Etherow - macroinvertebrate data

percentage frequency of all taxa in all spring kick samples with a minimum abundance >2%

12.4 River Etherow - aquatic macrophyte data

percentage cover estimates for 50 m survey stretch

no data for 1994, 1998 and 1999

12.5a River Etherow - salmonid data

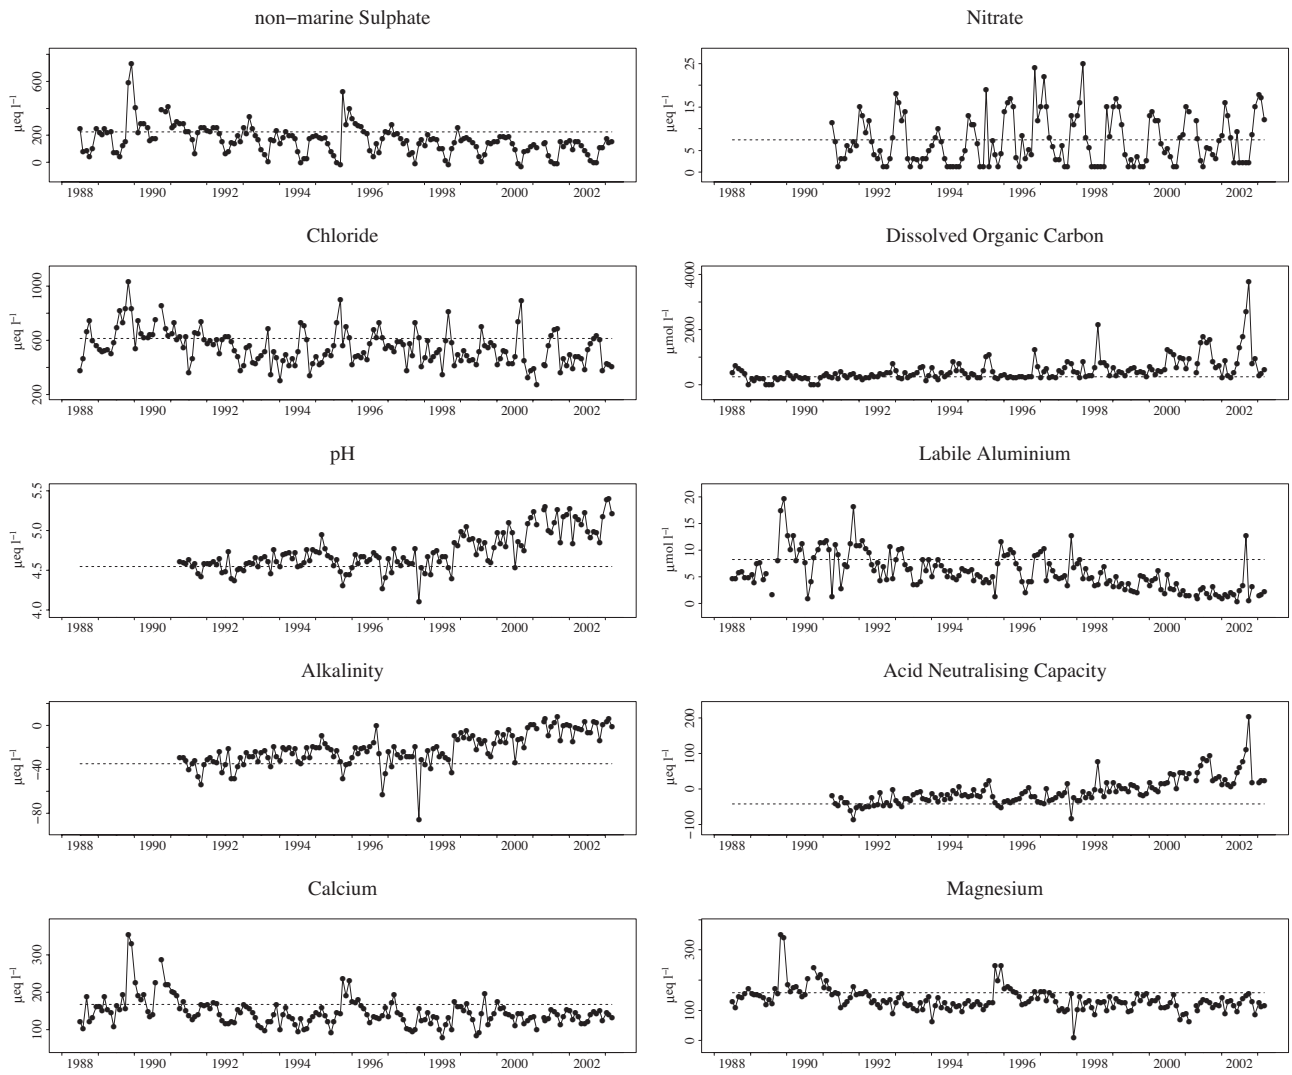

On sampling in 1989 this site was found to be fishless. As it lies immediately above a fishless reservoir, which prohibits the possibility of fish colonising from further downstream, no further sampling has been carried out.

20.3 Bencrom River - macroinvertebrate data

percentage frequency of all taxa in all spring kick samples with a minimum abundance >2%

20.4 Bencrom River - aquatic macrophyte data
percentage cover estimates for 50 m survey stretch
no data for 1994 and 2002

20.5a Bencrom River - salmonid data

Brown trout (*Salmo trutta*) density.

0 group (<1 year old black bars) and 0+ group (>1 year old; grey bars).

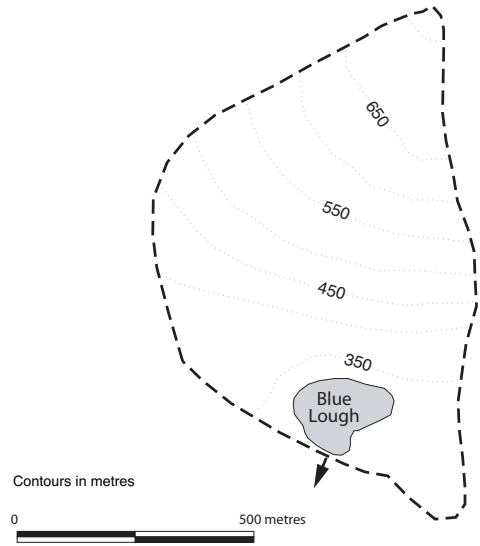

20.5b Bencrom River - salmonid data
 Brown trout (*Salmo trutta*) length frequency summaries

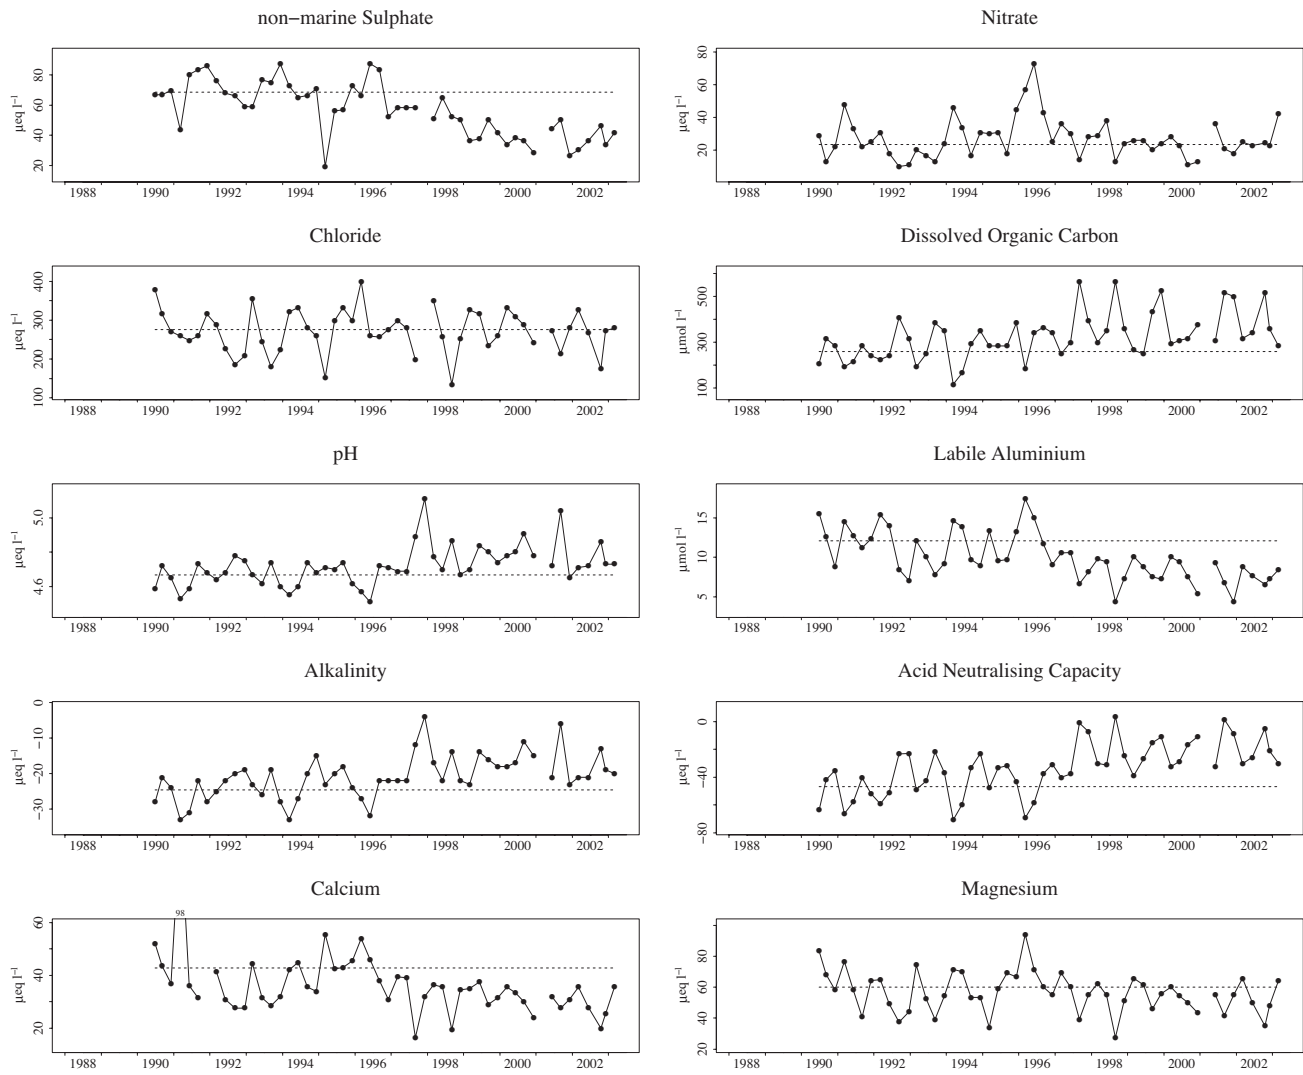

Site 21: Blue Lough

21.2 Blue Lough - epilithic diatom data

percentage frequency of all taxa in all summer samples with a minimum abundance >2%

21.3 Blue Lough - macroinvertebrate data

percentage frequency of all taxa in all spring kick samples with a minimum abundance >2%

21.4 Blue Lough - aquatic macrophyte data

relative abundance of taxa based on a 1-5 scale

1 = rare; 2 = occasional; 3 = frequent; 4 = abundant; 5 = dominant

21.5a Blue Lough - salmonid data

Brown trout (*Salmo trutta*) density.

0 group (<1 year old black bars) and 0+ group (>1 year old; grey bars), in lake outflow stream.

21.5b Blue Lough - salmonid data

Brown trout (*Salmo trutta*) length frequency summaries

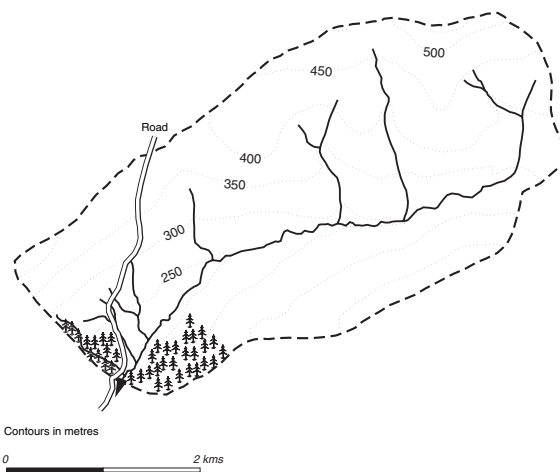

21.6 Blue Lough - sediment trap diatom data

Percentage frequency of all taxa in all samples (retrieved each summer) with a minimum abundance $>2\%$

22.2 Coneyglen Burn - epilithic diatom data

percentage frequency of all taxa in all summer samples with a minimum abundance >2%

22.3 Coneyglen Burn - macroinvertebrate data

percentage frequency of all taxa in all spring kick samples with a minimum abundance >2%

22.4 Coneyglen Burn - aquatic macrophyte data
percentage cover estimates for 50 m survey stretch
no data for 1994 and 2000

22.5a Coneyglen Burn - salmonid data

Brown trout (*Salmo trutta*) density.

0 group (<1 year old black bars) and 0+ group (>1 year old; grey bars).

APPENDIX 3

Participating Organisations

Project coordination: ENSIS-Environmental Change Research Centre (ECRC), University College London (UCL).

Chemistry database management: Centre for Ecology and Hydrology (CEH), Wallingford.

Biology database management: ENSIS-ECRC.

Stable determinand chemistry analyses: CEH, Wallingford.

Local chemistry analyses:

- Fisheries Research Services, Freshwater Laboratory, Pitlochry.
- Environment Agency, Llanelli.

Chemistry AQC: Water Research Centre (WRC), Medmenham

Continuous stream monitoring:

- Scottish Environmental Protection Agency (SEPA)
- CEH, Wallingford.

Macroinvertebrate analyses: School of Biological Sciences, QMW.

Aquatic macrophyte analyses: ENSIS-ECRC, UCL.

Epilithic diatom analyses: ENSIS-ECRC, UCL.

Lake sediment trap analyses: ENSIS-ECRC, UCL.

Fishery coordination: Institute of Freshwater Ecology, Wareham.

Fish Analyses:

- Fisheries Research Services, Freshwater Laboratory, Pitlochry.
- CEH Lancaster.
- School of Biological Sciences, QMW.
- University Enterprises Plymouth.
- Environment Agency, Llanelli & Caernarfon.
- Department of Agriculture, Northern Ireland.
